

### TASK

A renowned Swedish mining company was looking for a measuring unit to measure accelerator liquid in its concrete plant. They measure the accelerator liquid Sigunit® that is loaded to tank trucks and driven down the mine to fill up the concrete spraying machines.

### SOLUTION

Two ModMAG® meters are proving to be an ideal solution for the customer and ensuring consistent results of the concrete that is sprayed and hardened on the walls. This customer was so pleased that they recommended our Swedish distributor, Sikama, to another mining company.
