

Dosing paint manufacturing ingredients

Task

To manufacture paints and to achieve best results, it is necessary to measure and mix many ingredients such as pigments, fillings and binding substances.

Problem

A Swedish paint manufacturer was looking for an alternative to replace legacy eccentric disc meters.

Solution

Our Swedish distributor, Sikama, recommended three electromagnetic flow meters, which are now being used day to day to fulfill all tasks for dosing the different ingredients that are necessary to obtain the right mixture of paint and to fulfill the manufacturers expectations. Three models of the ModMAG® flow meters are connected to a PLC.
